Satellite Logistics Group Introduces First Integrated Online Visibility Tool

*Allows clients to view inventory and shipment information at any time to pinpoint
its supply chain location with a seamless application*

HOUSTON (November 11, 2005) – Houston-based Satellite Logistics Group of companies has developed the first online visibility tool that will allow clients to view a warehouse management system (WMS), a transportation system (TMS), and an international documentation system (IDS) in a single cohesive application.

The Satellite Logistics Group Online Visibility Tool provides an effective and secure way for its clients to view inventory and shipping status online from any location around the world. With enhanced communication across all supply chain systems, clients are able to condense management processes, monitor distribution easier, and improve overall efficiency.

“Brewers and beverage producers with products with limited shelf life have struggled with the time consuming process of manipulating three different systems to track their product to the marketplace. We heard those complaints and set to work on a solution. We achieved that goal through our Online Visibility System, which eliminates the need for multiple applications and provides product visibility to our client anywhere in the supply chain,” said Kevin Brady, Satellite Logistics Group owner and president.

Multiple Companies - - One Brand of Excellence

The Online Visibility Tool offers access from any modern web browser and enables clients to establish personalized user set-up specific to their information requirements. The strategic tool provides visibility to their company's data including trading partners setup on the account.

Features of the Transportation Management System include real-time visibility to shipments in transit as well as previously delivered shipments, ability to search on any reference number, and schedule customizable TMS reports deliverable by email.

Clients may also utilize the Warehouse Management System, which conveniently provides visibility to current inventory at any Satellite Logistics Group distribution center and visibility to receipts, shipments, and open orders. Results may be filtered and exported to Excel.

The Online Visibility Tool's International Documentation System feature allows companies to track the status of import/export shipments and offers visibility to open bookings and sailing dates.

An integrated logistics provider specializing in the beverage industry, Satellite Logistics Group of companies offers a host of integrated online visible solutions such as warehouse inventory management, supply chain management, product distribution, and product disposal services since being founded in 1984. Satellite Logistics Group revolutionized the keg return process for brewers around the world through its trademarked Kegspediter® System. The system is a proprietary custom technology platform that serves as the benchmark for the industry. For more information about Satellite Logistics Group of companies and the Kegspediter® System, please visit www.slg.com.
